

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Previously Presented) An end effector assembly for obtaining multiple tissue samples comprising:

a first jaw; and

a jaw assembly pivotally connected to the first jaw and having:

a cutting portion for mating with the first jaw to cut a tissue sample;

a holder; and

a storage portion configured to store tissue samples,

wherein the holder is configured to receive the cutting portion and the storage portion,

wherein the holder has a groove for receiving both a protrusion on the cutting portion and a protrusion on the storage portion.

2. (Original) The device of claim 1, wherein the holder has a top configured to receive the cutting portion and a bottom configured to receive the storage portion.

3-5. (Cancelled).

6. (Original) The device of claim 1, wherein at least a portion of the storage portion and a portion of the cutting portion are press-fit into the holder.

7. (Original) The device of claim 1, wherein the cutting portion and the holder are comprised of different materials.

8. (Original) The device of claim 1, wherein the cutting portion is comprised of metal and the holder is comprised of a non-metal material.

9. (Original) The device of claim 8, wherein the non-metal material is at least one of plastic, rubber, polycarbonate, PEEK, and Nylon.

10. (Original) The device of claim 1, wherein the cutting portion and the holder are comprised of the same material.

11. (Previously Presented) An end effector assembly for obtaining multiple tissue samples comprising:

a first jaw; and

a jaw assembly pivotally connected to the first jaw and having:

a cutting portion for mating with the first jaw to cut a tissue sample;

a holder; and

a storage portion configured to store tissue samples,

wherein the holder is configured to receive the cutting portion and the storage portion,

wherein the holder has a groove for receiving both a protrusion on the cutting portion and a protrusion on the storage portion, wherein both the cutting portion and the holder are comprised of metal.

12. (Original) The device of claim 1, wherein the first jaw includes a holder and a cutting portion.

13. (Original) The device of claim 1, wherein the holder and the cutting portion are formed separately.

14. (Original) The device of claim 1, wherein the holder is formed around the cutting portion.

15. (Original) The device of claim 1, wherein the storage portion is a pouch.

16. (Original) The device of claim 1, wherein the cutting portion has a non-straight portion connecting a tang to a cutting edge and configured to be received in a correspondingly-shaped gap in the holder.

17. (Original) The device of claim 1, wherein the cutting portion includes a cutting edge opposing a cutting surface of the first jaw.

18. (Original) The device of claim 1, wherein the cutting portion is stamped.

19. (Original) The device of claim 1, wherein the holder is injection molded.

20. (Original) The device of claim 1, wherein the cutting portion inserts into the holder.

21. (Original) The device of claim 1, wherein at least a portion of the cutting portion extends from the holder.

22. (Original) The device of claim 1, wherein the cutting portion is configured to provide structural support to the holder.

23. (Original) The device of claim 1, wherein a sharp portion of the first jaw mates with the cutting portion to cut the tissue sample.

24. (Original) The device of claim 1, wherein a sharp portion of the cutting portion mates with the first jaw to cut the tissue sample.

25. (Original) The device of claim 1, wherein a sharp portion of the first jaw mates with a sharp portion of the cutting portion to cut the tissue sample.

26. (Previously Presented) An endoscopic instrument comprising:

a proximal handle coupled to a distal end effector assembly via an elongate member, the proximal handle for actuating the distal end effector assembly;

wherein the distal end effector assembly includes:

a first jaw; and

a jaw assembly pivotally connected to the first jaw and having:

a cutting portion for mating with the first jaw to cut a tissue sample;

a holder; and

a storage portion configured to store tissue samples,

wherein the holder is configured to receive the cutting portion and the storage portion,

wherein the holder has a groove for receiving both a protrusion on the cutting portion and a protrusion on the storage portion.

27. (Original) The device of claim 26, wherein the holder has a top configured to receive the cutting portion and a bottom configured to receive the storage portion.

28-30. (Cancelled).

31. (Original) The device of claim 26, wherein the cutting portion and the holder are composed of different materials.

32. (Original) The device of claim 26, wherein the cutting portion is comprised of metal and the holder is comprised of a non-metal material.

33. (Original) The device of claim 32, wherein the non-metal material is at least one of plastic, rubber, polycarbonate, PEEK, and Nylon.

34. (Original) The device of claim 26, wherein the cutting portion and the holder are comprised of the same material.

35. (Previously Presented) An endoscopic instrument comprising:  
a proximal handle coupled to a distal end effector assembly via an elongate member, the proximal handle for actuating the distal end effector assembly;  
wherein the distal end effector assembly includes:  
    a first jaw; and  
    a jaw assembly pivotally connected to the first jaw and having:  
        a cutting portion for mating with the first jaw to cut a tissue sample;  
        a holder; and  
        a storage portion configured to store tissue samples,  
    wherein the holder is configured to receive the cutting portion and  
        the storage portion,  
    wherein the holder has a groove for receiving both a protrusion on the cutting portion and a protrusion on the storage portion, wherein both the cutting portion and the holder are comprised of metal.

36. (Original) The device of claim 26, wherein the first jaw includes a holder and a cutting portion.

37. (Original) The device of claim 26, wherein the holder and the cutting portion are formed separately.

38. (Original) The device of claim 26, wherein the holder is formed around the cutting portion.

39. (Original) The device of claim 26, wherein the storage portion is a pouch.

40. (Original) The device of claim 26, wherein the cutting portion has a non-straight portion connecting a tang to a cutting edge and configured to be received in a correspondingly-shaped gap in the holder.

41. (Original) The device of claim 26, wherein the cutting portion includes a cutting edge opposing a cutting surface of the first jaw.

42. (Original) The device of claim 26, wherein the cutting portion is stamped.

43. (Original) The device of claim 26, wherein the holder is injection molded.

44. (Original) The device of claim 26, wherein the cutting portion inserts into the holder.

45. (Original) The device of claim 26, wherein at least a portion of the cutting portion extends from the holder.

46. (Original) The device of claim 26, wherein the cutting portion is configured to provide structural support to the holder.

47. (Original) The device of claim 26, wherein a sharp portion of the first jaw mates with the cutting portion to cut the tissue sample.

48. (Original) The device of claim 26, wherein a sharp portion of the cutting portion mates with the first jaw to cut the tissue sample.

49. (Original) The device of claim 26, wherein a sharp portion of the first jaw mates with a sharp portion of the cutting portion to cut the tissue sample.

50. - 86. (Cancelled).

87. (Previously Presented) The device of claim 16, wherein the tang defines a pivot bore and an actuator hole, and the non-straight portion is between the tang and the cutting edge.

88. (Previously Presented) The device of claim 40, wherein the tang defines a pivot bore and an actuator hole, and the non-straight portion is between the tang and the cutting edge.

89. - 94. (Cancelled).

95. (Previously Presented) The device of claim 1, wherein the protrusion on the cutting portion extends continuously about an entire perimeter of a bottom edge of a vertical wall of the cutting portion.

96. (Previously Presented) The device of claim 26, wherein the protrusion on the cutting portion extends continuously about an entire perimeter of a bottom edge of a vertical wall of the cutting portion.

97. - 103 (Cancelled).

104. (Previously Presented) The device of claim 1, wherein the groove is located closer to a bottom of the holder than a top of the holder.

105. (Previously Presented) The device of claim 26, wherein the groove is located closer to a bottom of the holder than a top of the holder.

106. (Cancelled).
